

# SECTION 13

## POLICE SPORT UK RECORD SCORES

### 13 Overview

It is important to recognise and record those scores and achievements that mark the setting of a high or highest score within each of the disciplines contested within Police Sport UK shooting.

Definition: **Record** – *most extreme known value of some achievement.*

- 13.1** These rules set out to formalise and standardise the criteria required to approve the recognition of a Police Sport UK record score.
- 13.1.1** For the purpose of this document the terms 'record', 'records' & 'record score' relate to Police Sport UK records
- 13.2** All potential records **MUST** be verified and approved by the section Committee, or a sub-committee if so identified
- 13.2.1** A record score can only be achieved in the following circumstances:
- 1 Police Sport UK Championship meeting
  - 2 Police Sport UK Representative (*Authorised by Police Sport UK Council*) match or competition
- 13.2.2** Any score achieved outside of the criteria at 13.2.1 cannot be considered as a Police Sport UK record, in the same way that an Olympic Record can **ONLY** be achieved at an Olympic Games
- 13.3** Records must be established in accordance with the applicable rules for the shooting discipline.
- 13.4** A record score cannot be achieved at a training or selection event **UNLESS** that event is a part of any of the conditions met at 13.2.1
- 13.5** Some events for women competitors (notably ISSF events) will require the competitor to complete a 'full' (Men's) course of fire with the first 'xx' shots being extracted from the overall score for the purposes of recording the score for the women's event.  
In these cases **ONLY** the score that has been extracted and **RECORDED** by the organiser(s) may be considered for verification and approval.
- 13.5.1** Events (usually ISSF) that are recorded using electronic scoring targets, in certain circumstances, **MAY** be scored decimally. Where electronic systems are not available, integer scores will still be used. It is possible that some events will, therefore, have 2 records - Decimal and Integer. This is because many ranges do not have the ability or facility to record decimal scores
- note:* Integer scores are those that simply record the whole number 10, 9, 8 etc, whilst decimal scoring provides a maximum score of 10.9 per shot and each 'integer' being divided into tenths. A 60 shot competition therefore will have a Maximum possible Score of  $10.9 \times 60 = 654$
- 13.5.2** If a result sheet or register shows a score in both integer and decimal formats, only the format used to publish results will be considered for record purposes. The other (non-published) format will only be viewed as a comparison for personal improvement.
- 13.6** A list of current record scores will be maintained and published on the sections website. Previous record scores should also be retained where available.
